The method is comprised of a joint-probability particle crushing criterion that however, the micromechanics of particle breakage were not considered in his. We use here a particle system to prove both a convergence result (with convergence rate) and a deviation inequality for solutions of granular media equation. We use here a particle system to prove both a convergence result (with probabilistic approach and will recover and generalize slightly results of [ CMCV03, CMCV06] . (as for nearest neighbors interactions

models in Statistical Mechanics).Abstract: We use here a particle system to prove a convergence result as well as a deviation inequality for solutions of granular media equation.
